Hiring Manager,  
Fiera Capital

I am Het Kansara, Web & Mobile Application Developer. My four main key-features are self and quick learning, my experience with projects, being a team player and my work ethics. Due to my swift learnability and my technical skills, I was a natural candidate for many college projects(web/mobile apps), both internal and external. I have made several projects for my college. This includes GU Transcript Issuance System, LJ Internship Fair, Student SMS notification system - just to name a few. Also, I love solving real-world problems of people and hence I've also made systems for relatives of mine who wanted to automate many of their repetitive tasks or who wanted an IT infrastructure to support their business. Send My Sms is one such project of mine.

I have completed my masters degree with distinction and throughout my studies I learned many subjects like HTML/CSS, Javascript, PHP, Angular, Ionic etc. which attracted me towards Web design and development. Also, I have participated in many state level web designing competitions and most of the time I was declared the winner or the runner up. That academic background and accomplishments have prepared me for success.

Also, I'm a team player and I like to add value to my teammates whenever possible. I have a friendly nature and get along with everyone. My friends always learn something new when working with me. I believe in delivering business value to my clients(college/relatives) as fast as possible. Hence, many of my projects were completed within days of assigning it to me. Throughout my employment period, I was the key developer of one of the biggest projects(A cross platform IOT Application) of the company. Also, appreciated with the certificate for providing noteworthy contribution of the success of that company for the year 2018.

Currently, I am a Web Development student at Humber College. My expected graduation is August, 2020 and I am looking for a co-op to complete Web Development at Humber College.

I am excited to begin my Industrial experience here in Canada and I am committed to achieving new milestones in the IT Industry.

I hope this short description will be enough to convince you to give me a chance to showcase my talents in the personal interview. If you have any questions for me or if I can be of assistance in any way, please let me know. You may reach me at [hetkansara.work@gmail.com](mailto:hetkansara.work@gmail.com)
